

Christopher Lu

FULL STACK SOFTWARE ENGINEER

New York, NY • christopherlu.dev • github.com/christopher-lu • linkedin.com/in/christopher-lu19 • lu.christopher.m@gmail.com

PROFESSIONAL SUMMARY

Full Stack Software Engineer with experience architecting secure web, mobile, and backend platforms that improve business operations, streamline developer workflows, and enhance customer experiences. Proven record of delivering measurable impact through scalable system design, automation, reusable architecture, and cross-functional collaboration using TypeScript, React, React Native, NestJS, PostgreSQL, and Prisma ORM.

TECHNICAL SKILLS

Languages
Frontend
Backend
Databases
Cloud
Testing
Tools

TypeScript • JavaScript • SQL
React • Next.js • React Native • Tailwind CSS
NestJS • Node.js • Express • REST APIs • GraphQL
PostgreSQL • Prisma ORM • MongoDB
Docker • Kubernetes • AWS
Jest • React Testing Library • Swagger/OpenAPI
Git • GitHub • Jira • Prometheus • Grafana • Agile/Scrum

PROFESSIONAL EXPERIENCE

Did I Do That (DIDT) | Full Stack Software Engineer

2026–Present

- Architected the backend for Did I Do That (DIDT), a cross-platform habit management platform, by designing 7 modular feature domains using NestJS, Prisma ORM, PostgreSQL, JWT, and Argon2, creating a scalable foundation for secure user and habit management.
- Developed a React Native application spanning 13 user-facing screens and reusable components, creating a modular architecture that accelerates feature delivery and simplifies long-term maintenance.
- Designed normalized PostgreSQL data models supporting users, categories, habits, and habit logs, enabling secure CRUD operations and scalable application growth across 4 core entities.
- Implemented secure authentication using JWT and Argon2, establishing a centralized authentication workflow that protects user accounts and supports future platform expansion.
- Implemented request validation, centralized error handling, and modular API organization across 7 feature domains, improving application reliability and simplifying future feature development.
- Established engineering standards with Docker, TypeScript, ESLint, Prettier, Husky, and structured project organization, creating a consistent development workflow for long-term maintainability.

Tern Systems | Full Stack Software Engineer

2024–2026

- Improved billing accuracy by 60%+ while reducing manual tax calculation errors by 40% through automated ZIP code-based tax calculations.
- Reduced unnecessary page reloads by 33% and improved application load times by 25% through optimized Next.js routing and navigation.
- Standardized reusable React components and shared TypeScript models to accelerate feature delivery and improve maintainability.
- Partnered with cross-functional stakeholders to deliver customer-facing enhancements while maintaining scalable frontend architecture.

OS Labs | Software Engineer

2023–Present

- Engineered KlusterBud, an open-source Kubernetes observability platform.
- Improved dashboard responsiveness by approximately 20% through scalable metrics APIs and PromQL-powered dashboards.
- Built reusable frontend architecture that reduced duplicate logic and streamlined future feature development.
- Collaborated on Kubernetes monitoring features that simplified infrastructure visibility for developers.

Loadsmart | Customer Support Analyst II

2022–2023

- Reduced onboarding time by 60% by designing technical training curriculum and customer documentation.
- Resolved 95%+ of enterprise SaaS support requests within 1 hour using Jira, Zendesk, Salesforce, and REST APIs.
- Supported enterprise migrations achieving 70%+ customer retention while providing API integration support and product feedback.
- Improved customer engagement by 10%+ through SLA reporting standards and operational metrics.

Apple | Specialist (Product, Business, & Tier 1 Voice/Chat Support)

2018–2022

- Contributed to an 85% customer retention rate through technical troubleshooting and tailored business solutions.
- Improved product proficiency to 80%+ by delivering technical training to customers and teammates.
- Increased customer satisfaction by 5% through coaching, mentoring, and workflow improvements.

PROJECTS

christopherlu.dev | Personal Engineering Portfolio

- Designed and developed a production-ready Next.js portfolio using reusable components, centralized content management, responsive design, dark mode, and scalable architecture.
- Built reusable UI patterns and centralized project data to simplify future expansion and ongoing maintenance.

EDUCATION

Stony Brook University — Biology
